

BeneCare™ ROM Walker Boot

A high quality walker boot that conforms to the leg and immobilises the ankle with adjustable range of motion control.

The BeneFoot ROM Walker Boot is ideal for anyone recovering from any lower leg fractures, sprains and after any operations as it allows the lower leg to be splinted in a rigid cast format in the initial recovery stage and when instructed by a physiotherapist the movement for the ankle can be increased slowly. This early range of motion will aid many people in starting their rehabilitation while still having the maximum amount of protection available and starting to walk as soon as possible in a near natural way will reduce the aches and pains in the knee or hip joints that can occur when in a rigid plaster cast. This is a top level boot giving a high standard in protection.

Features & Benefits

- Range of motion joint has 0-60 degrees in dorsiflexion
- Range of motion has 0-70 in plantar flexion adjustments in 10 increments
- Hook & Loop closure provides easy adjustment
- Ultra low profile design eliminates height difference and facilitates natural gait
- Padded soft foam keeps lower leg comfortable
- Metal stirrups immobilise the ankle securely and comfortably
- Impact resistant and shock absorbing sole for enhanced protection
- Rocker bottom sole allows easier ambulation

Indications For Use

- Replaces the need for serial casting
- Stable fracture of fibula, calcaneus and malleolus
- Post ligament, soft tissue and tendon surgery
- Post surgery rehabilitation
- The hinge allows controlled adjustments to the position of the ankle
- Reupture of achilles tendon
